

PRECISION TUBULAR ASSEMBLIES

- From the design stage to the final assembly
- Express service for your prototypes
- Tubing and components according to your specifications
- A wide spectrum of technologies
- Quality assurance at its best

MINITUBES

surgery, endoscopy

diagnostic probes

sensors, temperature control

microassemblies

From the design stage to final assembly

We produce the tubing, source the components and assemble, thus freeing you from all logistics. We can also assist you in the design to meet your demands through our technologies.

Express prototype service

Integrated tubing production, on-site tooling, fabrication and assembly permit the quick production of your prototypes.

Tubes and components to your specifications

Because each of your products has specific demands, we do not impose any standard tubing : you choose the fittest alloy, specify exact dimensions, surface finish, mechanical and physical properties, etc...

A wide spectrum of technologies

- Tubing fabrication: burr free cutting, end closing, swaging, flaring, bending, coiling, piercing, notching, bulging, etc...
- Coating: teflon, polymers, plating.
- Surface control: electropolishing, buffing, honing, passivating, engraving, control of the surface finish even on very small internal diameters.
- Welding: laser, plasma, TIG, electrical.
- Soldering, brazing, crimping, glueing.

Quality Assurance at its best

With ISO 9001, ISO 13485 as references, our objective is zero defect. Our quality system is described in a handbook which you are welcome to ask for.
